Headline: Dorsey Metrology announces support of Standard Gage® products.

Dorsey Metrology announces support of Standard Gage® products

Following Brown & Sharpe's announcement of the closure of the Standard Gage® plant in Poughkeepsie New York; Dorsey Metrology International, also located in Poughkeepsie, NY, announced their intention to manufacture and support many of the products that were previously manufactured by Standard Gage® prior to their plant closure. Dorsey acquired much of Standard Gage's® specialized tooling and machinery at auction and subsequently hired key former Standard Gage® employees to continue manufacturing many of the core products which have been made in Poughkeepsie since 1925. Dorsey's CEO Ted Luty commented that "Standard Gage® bore gages and snap gages have been the industry standard for many years and there are many customers with a tremendous inventory of these gages in use. It is our intention to provide these customers with the same high quality replacement gages, interchangeable replacement parts and modifications to specials to meet their current and future demands".

Dorsey now manufactures and stocks the Standard Gage® style bore gages in the #4, #5 and #6 sizes and also supplies replacement parts for many of the other bore gages in steel and carbide varieties. Dorsey is also manufacturing a series of snap gage based on the Paraloc D® style gage which features interchangeable parts. In addition Dorsey will continue to offer its current line of precision dimensional gaging products and optical comparators as it has since 1955.
