

# MODEL J2 HORIZONTAL JAW GAGE

The model J2 jaw gage features Dorsey's proven precision lapped chrome/steel bushing in a rigid cast iron frame. A series of interchangeable contacts, and adjustable two axis rest stage along with a micrometer tail stock combine to make the J2 jaw gage suitable for most high accuracy OD inspection tasks.

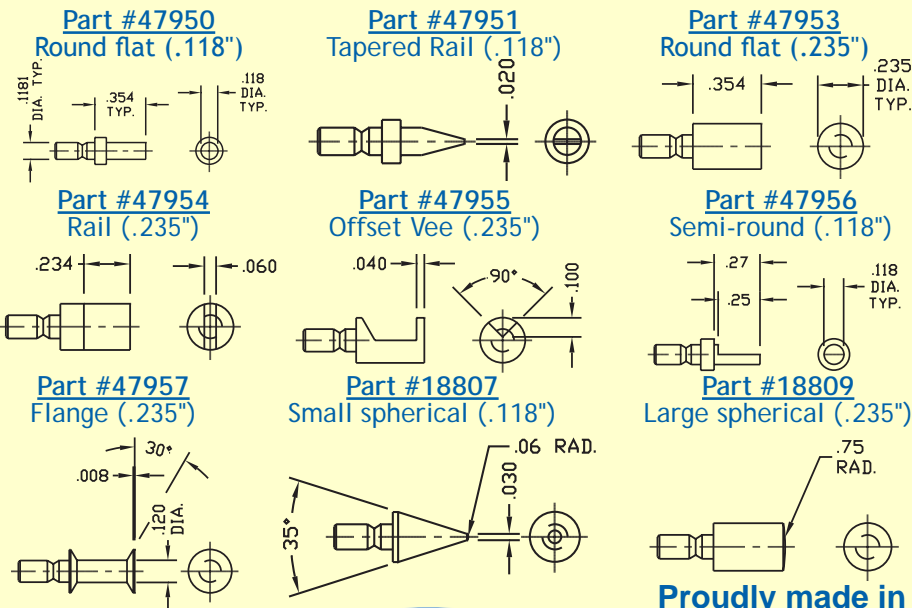

## FEATURES:

- Ideal for screw machine and small parts applications
- Check diameters, widths, lengths, and locations
- Specifically designed for Dorsey's high amplification dial indicators with graduations as fine as .00002" (0.0005mm)
- Utilize dial and digital indicators, or electronic displays and is SPC compatible
- Standard thumb actuated retraction of .100" makes part loading easy
- Tailstock fine adjustment of 1" maintains contact parallelism throughout the gaging range
- Interchangeable contact points are available for a variety of part configurations. Each set of contacts utilizes a shank-lock design for maximum holding pressure
- Backstop for locating the part may be adjusted both horizontally or vertically to suit the part configuration

Gage shown below features round carbide contacts (part #47950), and model #414-002 dial indicator (sold separately)
